

# Construction Waste Management

Construction projects **must** provide on-site containers for loose debris, paper building material waste, scrap building materials, and other trash produced by those working on the site.

## Keep it clean!

Construction sites must be maintained to remain clean and orderly. Place trash in dumpster or other on-site container.

## Impact of loose construction trash

Loose litter not only looks bad, it is also bad for the surrounding environment. When it rains, stormwater that flows over the construction site can mobilize litter and pollutants into nearby creeks, streams and eventually the Swannanoa River. Litter and pollutants harm the aquatic organisms that live in those environments.

Help us keep Black Mountain creeks and streams clean as you add to the landscape of our town.
